

# Extra materials...

For discussion and further  
information

(not necessarily intelligible without an  
accompanying description!)

# Example 1

I1-[OntoSpace]

## Plug-and-play spatial ontologies

# Modeling space

I1-[OntoSpace]

- Different tasks require different perspectives on space
  - Spatial inclusion relationships, e.g., region connectivity (RCC-5, RCC-8, etc.)
  - Navigation and way finding, e.g., route graphs, double cross calculus, dipoles, ...
  - Natural language interaction: e.g., reference systems, figure-ground relationships
  - Commonsense artefactual ontologies

# Locating objects...

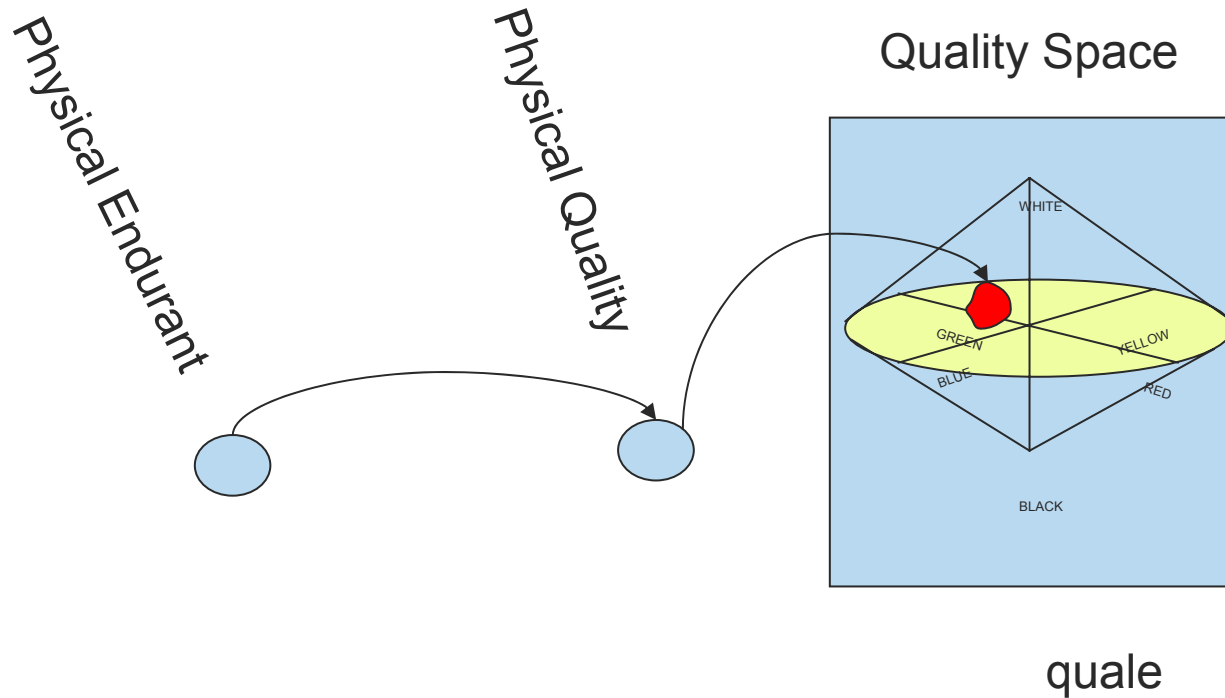

I1-[OntoSpace]

- Every physical endurant (object) has the quality of being located
- Location is made with respect to a spatial quality region: the 'space region'
- Questions are:
  - How to characterize that location?
  - How to characterize its space?

# Defining Qualities in DOLCE

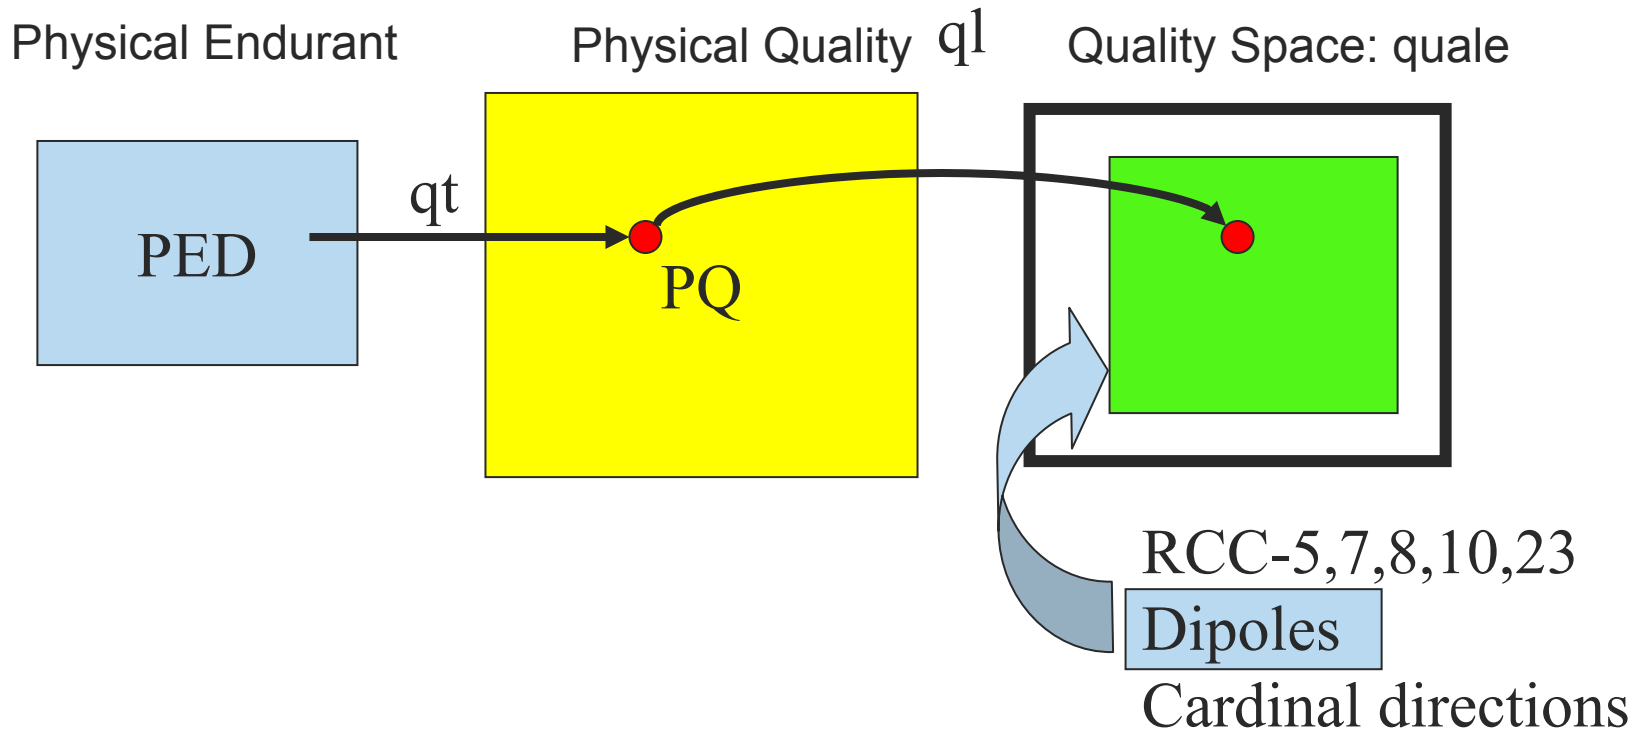

I1-[OntoSpace]

# 'Swappable' treatments of space

I1-[OntoSpace]

# 'Swappable' treatments of space: specification

I1-[OntoSpace]

CASL modules for each spatial 'theory'

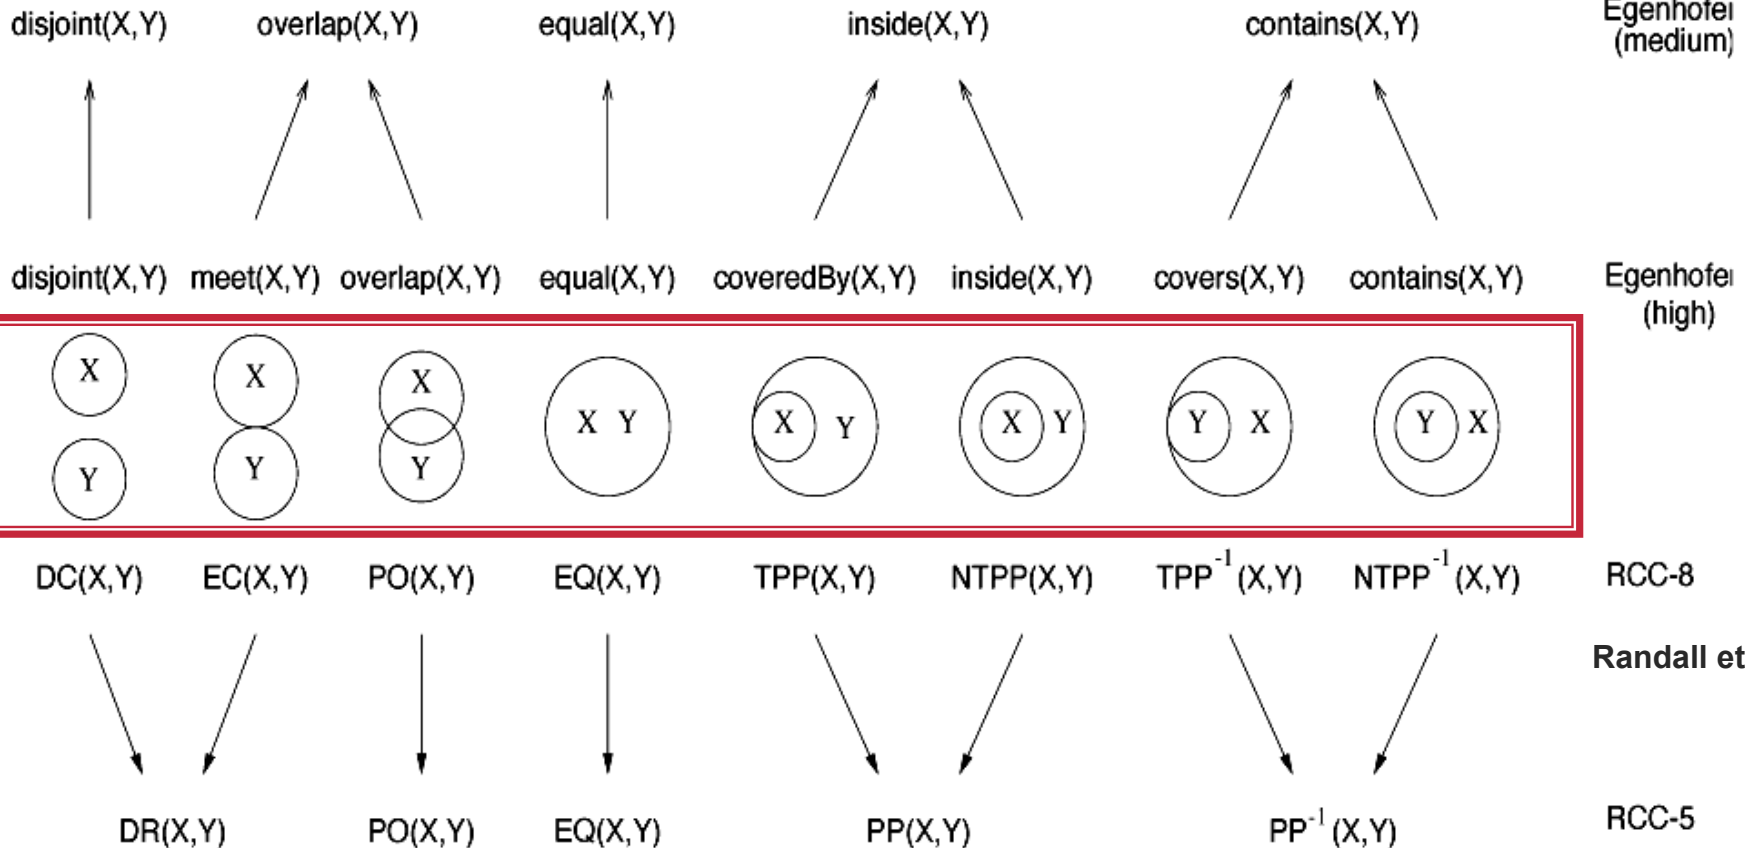

CASL specification of DOLCE first order specification

# Example:

Region-Connection Spaces RCC-5, RCC-8, etc.

I1-[OntoSpace]

# Definitions of Spatial Calculi

(Wölfl & Mossakowski)

I1-[OntoSpace]

```
spec RCC5BASERELATIONS = %mono  
  free type BaseRel ::= dr | po | pp | ppi | eq  
end
```

```
spec RCC5COMPOSITIONTABLE =  
  sort BaseRel  
  ops dr,po,pp, ppi,eq: BaseRel  
  and COMPOSITIONTABLE with op id → eq  
then  
  ...  
end
```

```
spec RCC5 =  
  CONSTRUCTRELATIONALGEBRA [RCC5BASERELATIONS]  
  [RCC5COMPOSITIONTABLE fit op id:BaseRel → eq]  
end
```

# Definitions of Spatial Calculi (Wölfl & Mossakowski)

Theory morphisms via views

I1-[OntoSpace]

```
view RCC5 AS ATOMICRELATIONALGEBRA :  
  ATOMICRELATIONALGEBRA to RCC5 = AtomRel → BaseRel  
end
```

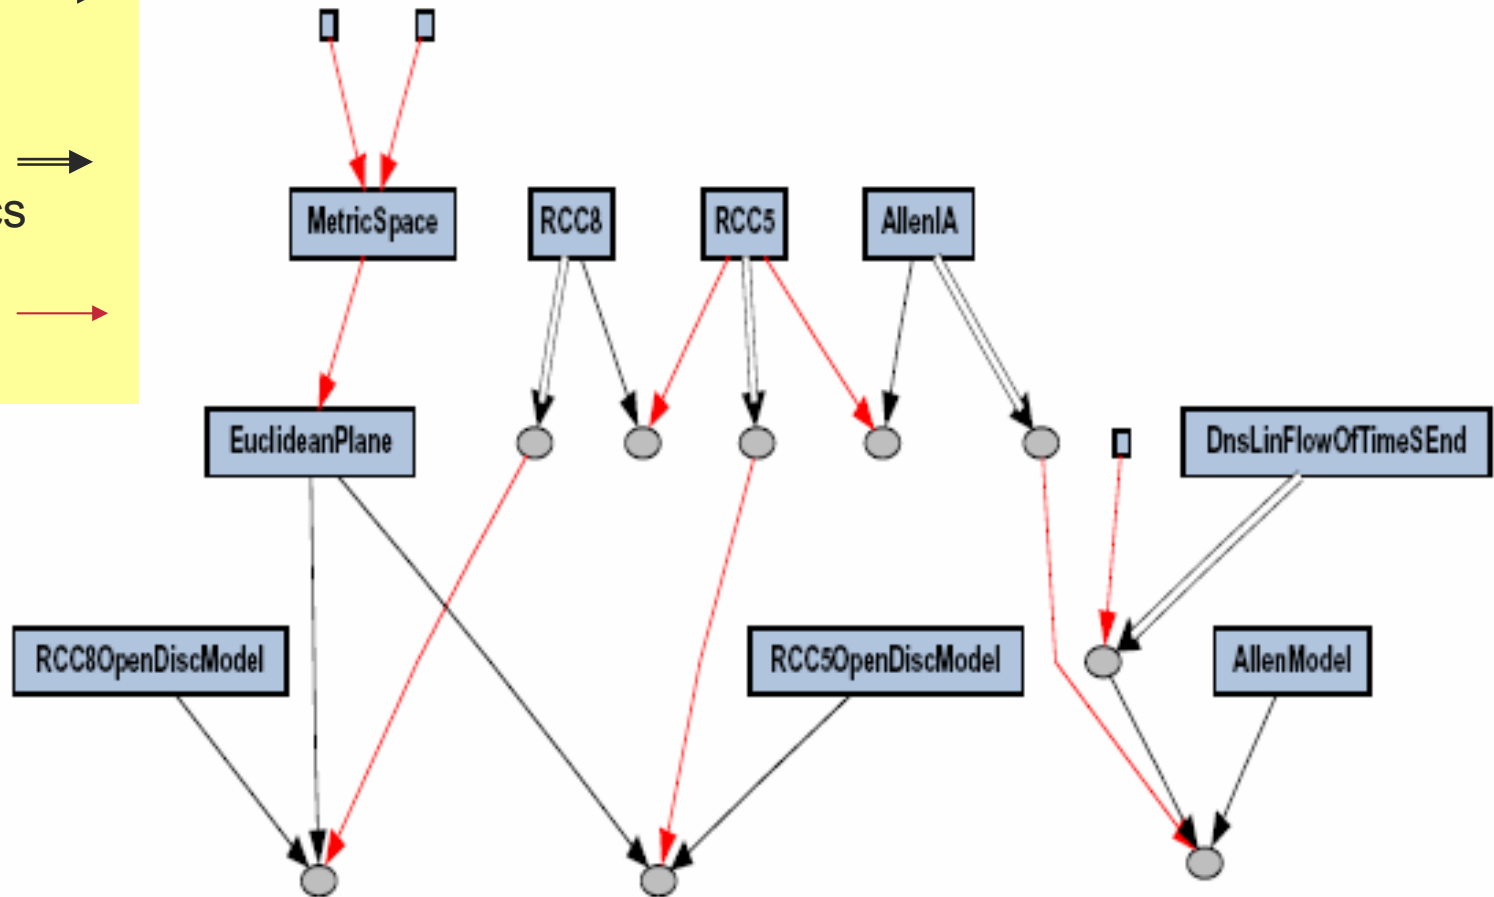

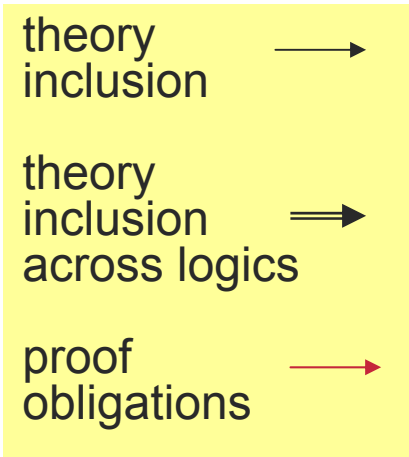

```
view RCC5 TO RCC8 :  
  RCC5  
  to { RCC8 then %def  
    ops dr, pp, ppi : Rel  
    • dr = dc  $\sqcup$  ec  
    • pp = tpp  $\sqcup$  ntpp  
    • ppi = tppi  $\sqcup$  ntppi }  
  = sort BaseRel → Rel  
end
```

# CASL development graph

(Wölfl & Mossakowski)

# CASL development graphs

I1-[OntoSpace]

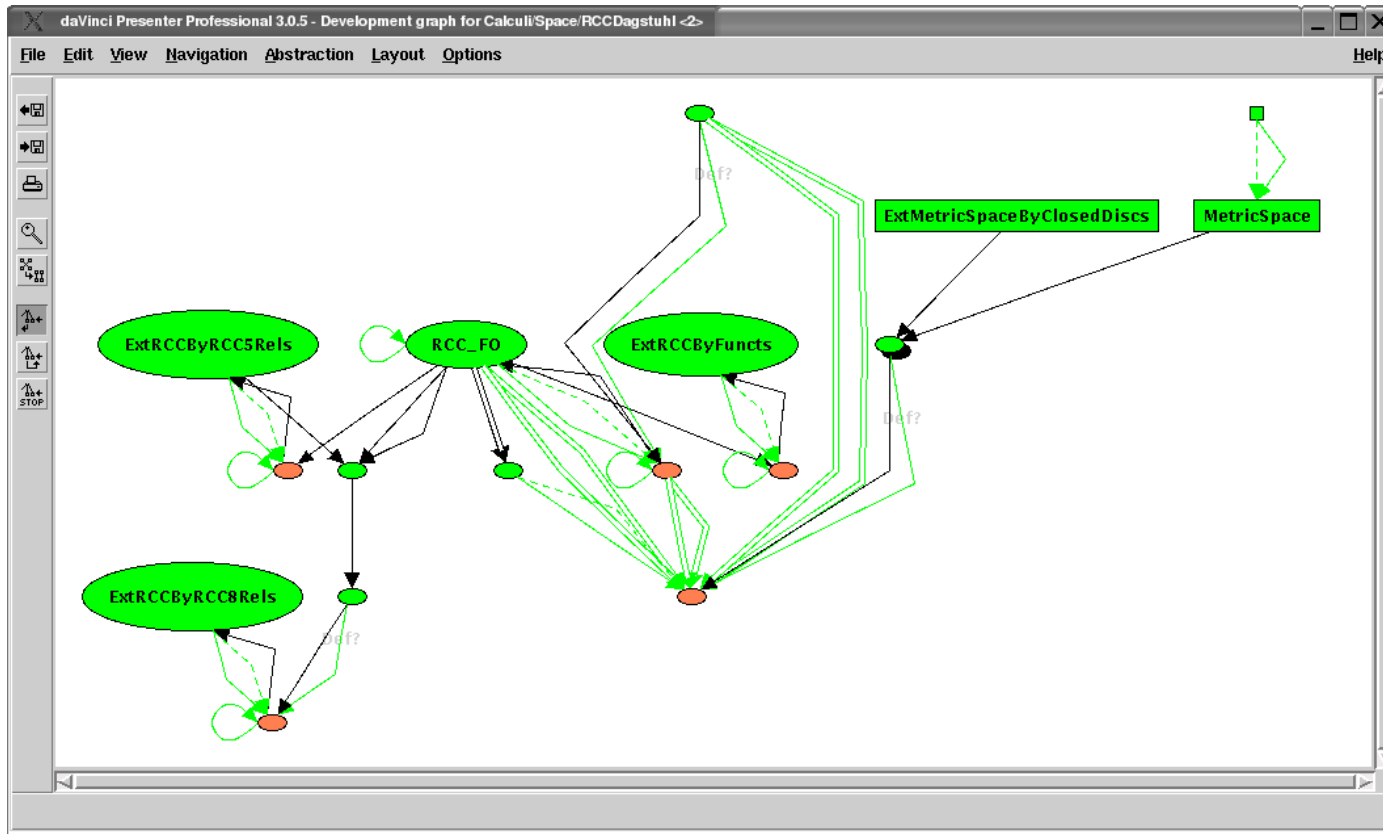

(Wölfli & Mossakowski)

# CASL development graphs

I1-[OntoSpace]

(Wöfl & Mossakowski)

# Example 2

I1-[OntoSpace]

More complex spatial  
categories

# BFO: Sites and Niches (Smith)

I1-[OntoSpace]

- Niches are entities in which inhabitants carry out distinctive activities
  - niches have spatial extent
  - niches exist over time
  - niches may have real and/or fiat boundaries
- Niches may have particular properties that support their inhabitants (biological examples)

# Artefactual niches: constructed 'habitats'

I1-[OntoSpace]

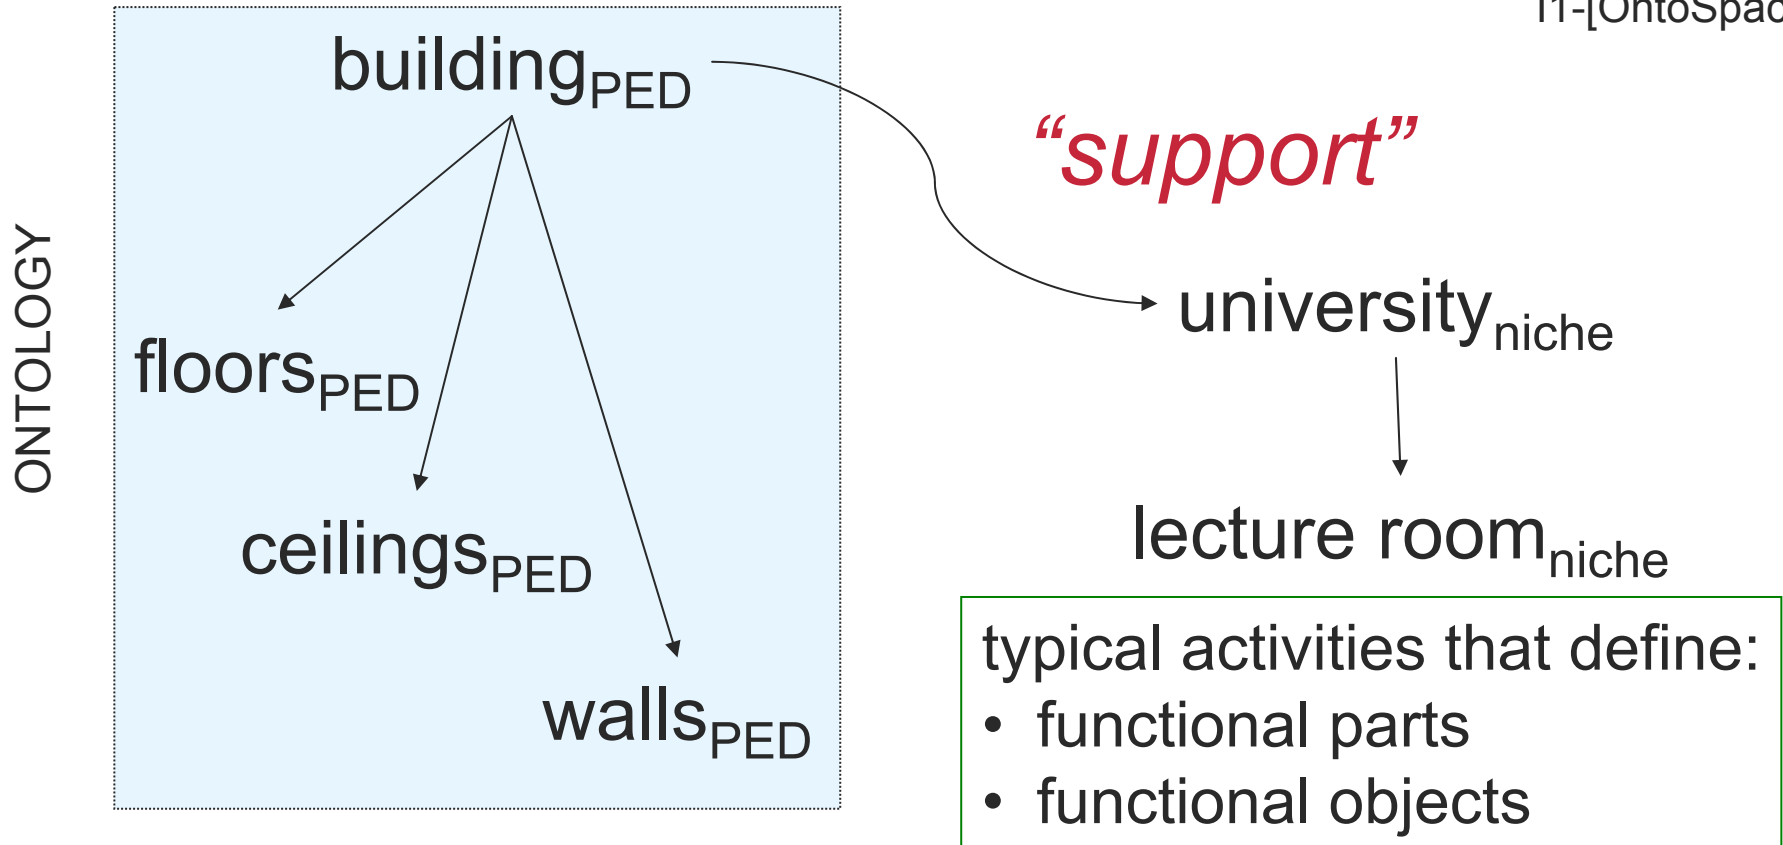

- Artefacts are a further abstraction over and above objects.
- Artefacts are constructed with the intention of providing 'capabilities'
- Objects (PED) may 'support' artefactual niches
  - e.g., a church<sub>PED</sub> supports a church<sub>niche</sub>
  - a university<sub>PED</sub> supports a university<sub>niche</sub>

# Artefactual Sites and Niches

I1-[OntoSpace]

EPISTEMOLOGY (Nondeterministic, nondiscrete?)

# Artefactual Sites: Environment spaces

[subsumption, in]

site

I1-[OntoSpace]

**environment space**

bounded space

unbounded space

building

room

corridor

*partonomies/granular partitions*

# Example 3

I1-[OntoSpace]

Applications to problems of  
pervasive computing

# Applications to problems of pervasive computing:

I1-[OntoSpace]

## Chen / Finin / Joshi (2004)

- Example context reasoning:
  - “No agent can be physically present in two different atomic places during the same time interval.”
  - “An agent can be physically present in two different compound places during the same time interval just in case one spatially subsumes the other.”
- Sensor mismatch / inconsistency detection
  - Person X is located in Parking Lot A
  - Person X is located in Room 210

# The same problem addressed within our approach

I1-[OntoSpace]

- Person X is located in Parking Lot A
- Person X is located in Room 210

- Properties of ‘persons’
- Properties of Physical Endurants
  - Location
  - Specification of an appropriate quality region
  - Use of appropriate spatial theory
  - Combination of ontological diversity
  - Selection of appropriate granularity

# The same problem addressed within our approach

I1-[OntoSpace]

- Person X is located in Parking Lot A
- Person X is located in Room 210

Characterize the **space**:

- select a granular partition appropriate for the task
- site artefacts :  
environment spaces

# The same problem addressed within our approach

I1-[OntoSpace]

- Person X is located in Parking Lot A
- Person X is located in Room 210

Characterize the **spatial task**:

- spatial inclusion
- regions: parts and connections

RCC-n

# The same problem addressed within our approach

I1-[OntoSpace]

# A related problem addressed within our approach

I1-[OntoSpace]

- Person X is located in Parking Lot A
- Person X **wants to be** located in Room 210

Characterize the **space**:

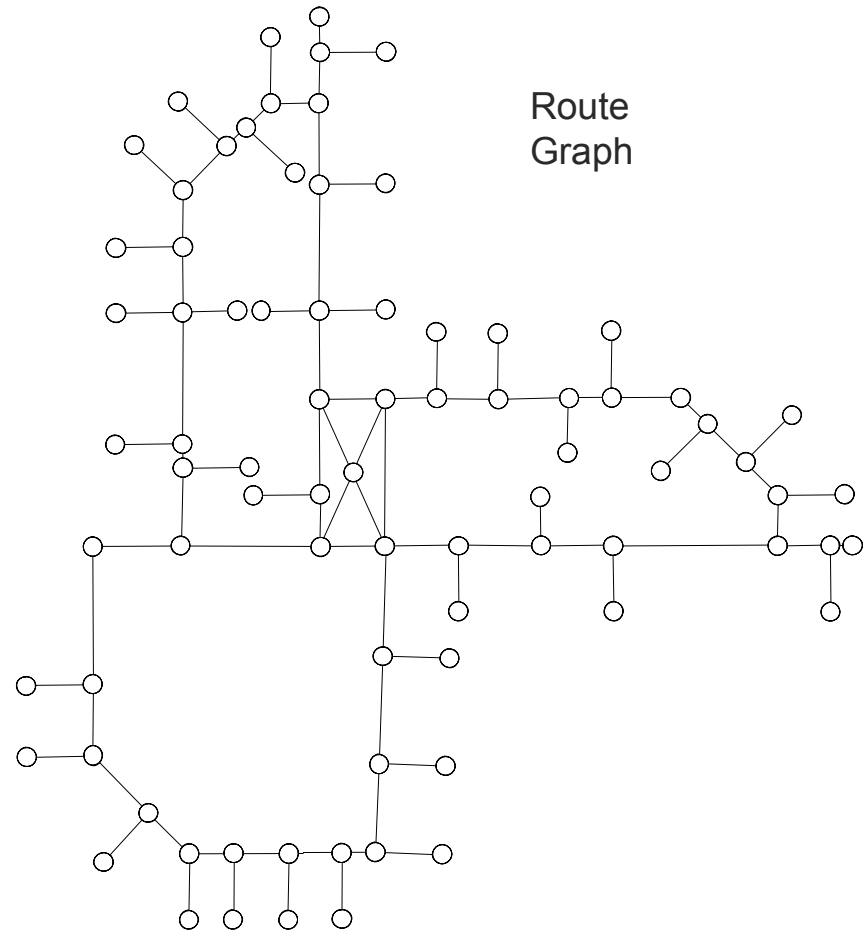

- select a granular partition appropriate for the task
- site artefacts :  
environment spaces

# A route graph

I1-[OntoSpace]

# A related problem addressed within our approach

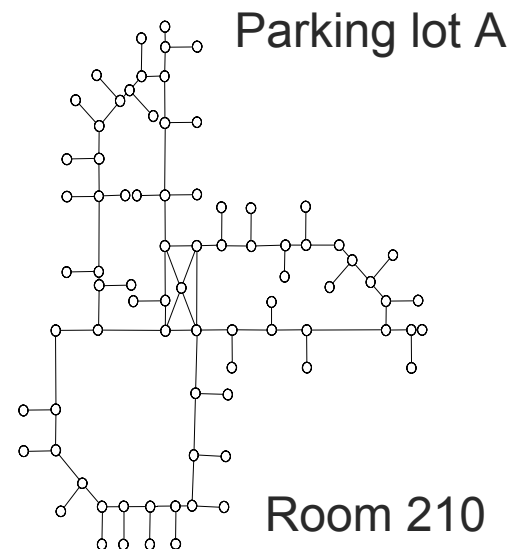

I1-[OntoSpace]

- Person X is located in Parking Lot A
- Person X **wants to be** located in Room 210

Characterize the **spatial task**:

- navigation
- space: supporting route planning, e.g., route graphs

Route graph

# A related problem addressed within our approach

I1-[OntoSpace]

**Environment spaces**

**Spatial quality spaces**

**Physical endurants**

locating  $t_1$

locating  $t_2$

RG

# Another related problem addressed within our approach

I1-[OntoSpace]

- Person X needs a **description** of how to get from Parking Lot A to Room 210

Characterize the **space**:

- select a granular partition appropriate for the task
- site artefacts :  
environment spaces

# Another related problem addressed within our approach

I1-[OntoSpace]

- Person X needs a **description** of how to get from Parking Lot A to Room 210

Characterize the **spatial task**:

- navigation
- space: supporting route planning, e.g., route graphs
- route description: linguistic expression

Parking lot A

Room 210

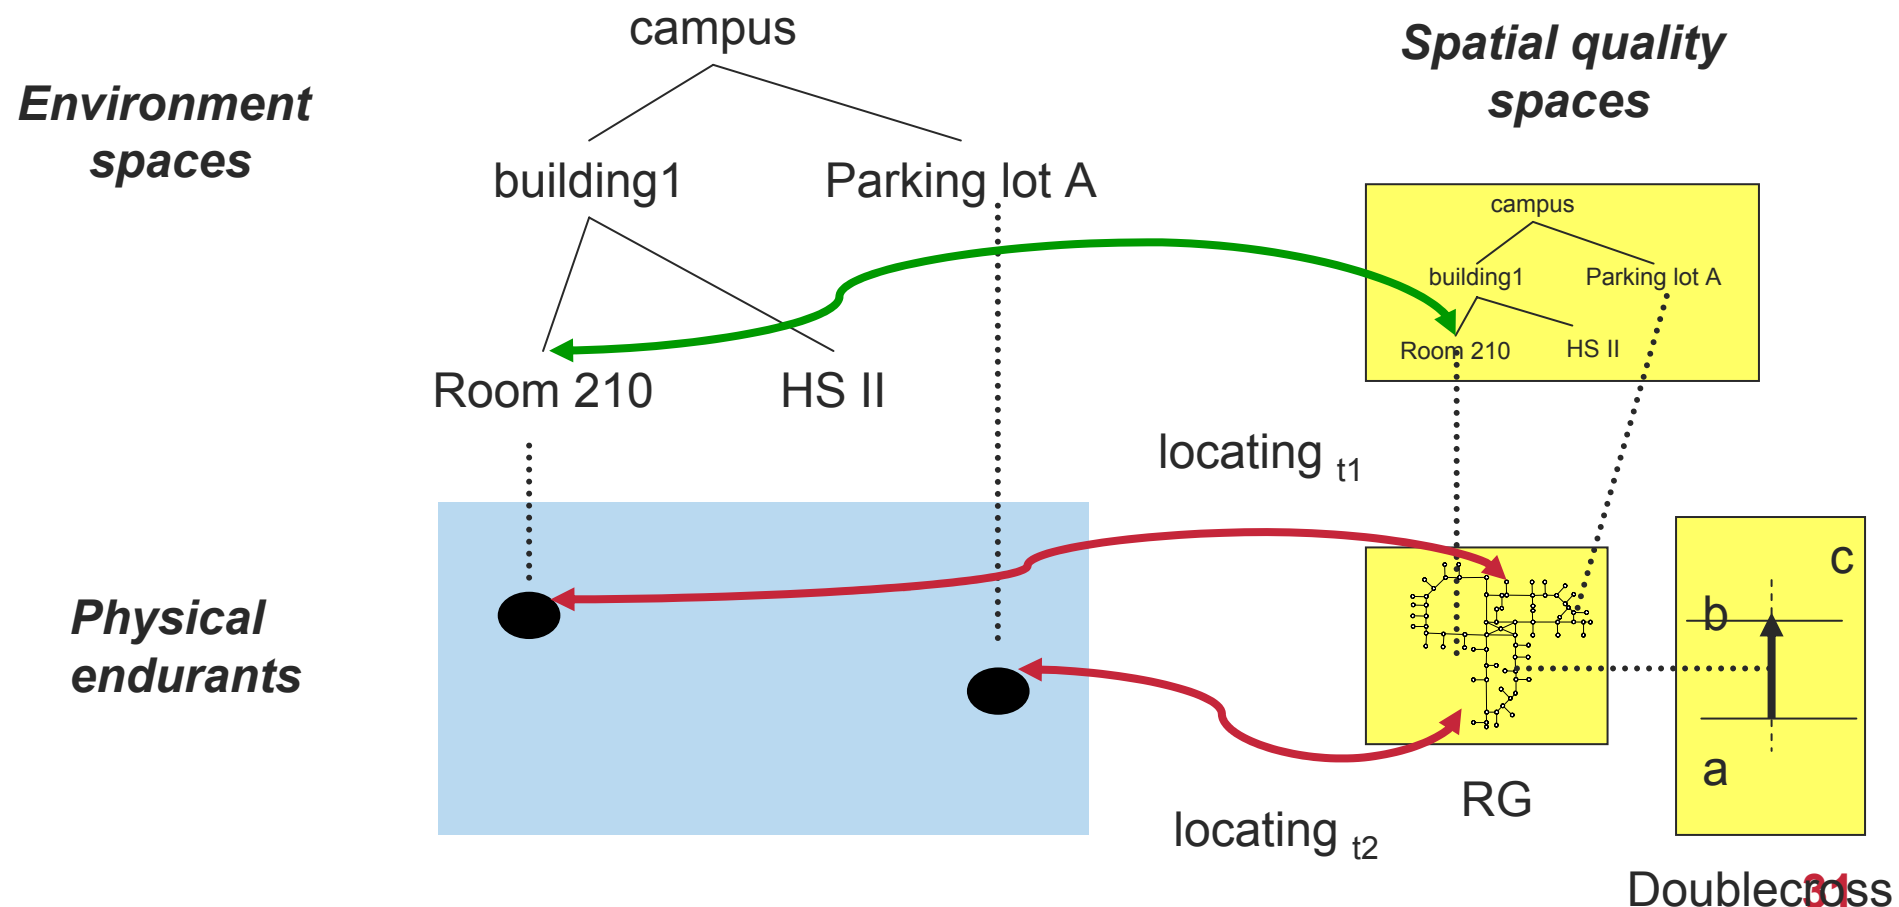

Route graph PLUS double-cross

# A related problem addressed within our approach

I1-[OntoSpace]

# Applications to problems of pervasive computing:

I1-[OntoSpace]

## Chen / Finin / Joshi (2004)

- Definition of problematic categories:
  - CompoundPlace vs. AtomicPlace
  - Many relations:  
locatedInCompoundPlace, locatedInRoom,  
locatedInRestroom, ...
  - Specific reasoning rules
- Most, if not all, of these are derivable from properly defined foundational ontologies

# Route Graph: Inter-ontological relations

I1-[OntoSpace]
